**Climate Services User Forum (CSUF)**

# **Impact-Based Forecasting for the Seasonal Outlook JJAS 2024**

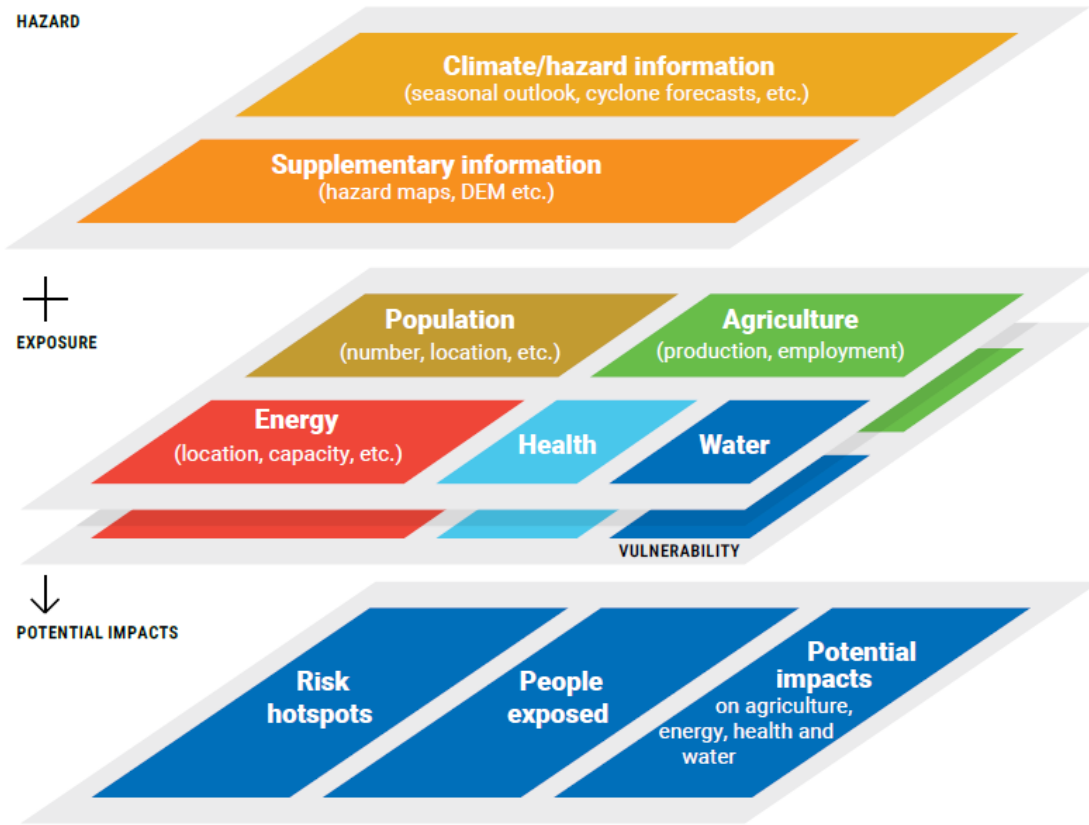

---

*Mr. Shashwat Avi*  
*Consultant, Disaster Risk Reduction, ESCAP*

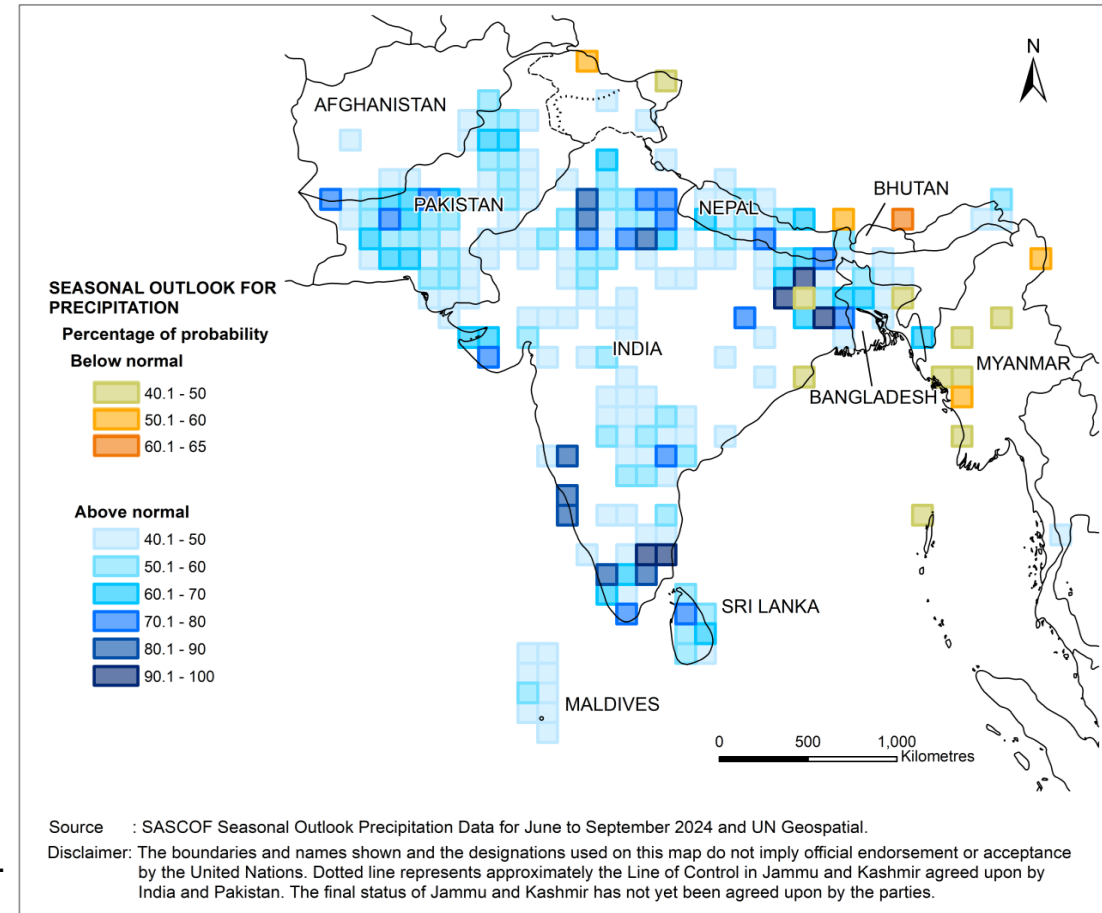

**1 May 2024**

# To support Early Warning Systems and EWS4All, ESCAP's impact-based forecasting in outlook forums on the Portal follows WMO Global Framework for Climate Services

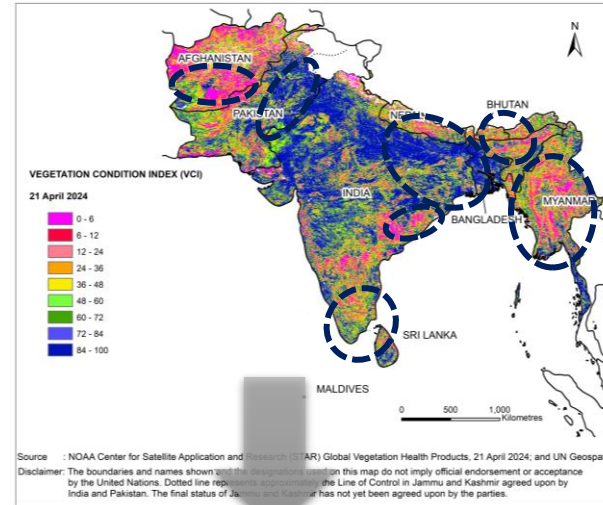

## SSWA Seasonal Outlook for precipitation June to September 2024

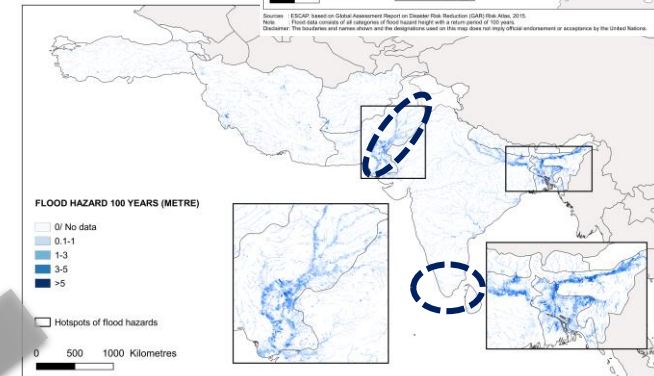

Source: ESCAP (2022) APDR – Pathways to Adaptation and Resilience in South and South-West Asia Overview of the work of secretariat and the UN system at the regional level. ESCAP/CDR/2021/INF/1

## Vegetation condition index as of 21 April 2024

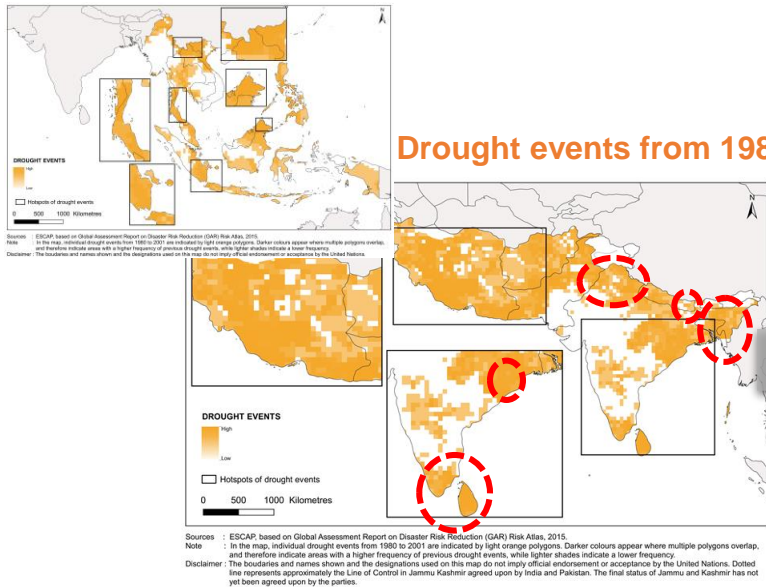

## Flood hazard in 100-year return period

## Seasonal Outlook JJAS 2024 Areas of attention for precipitation

Vegetation health during the most recent week, historical flood and drought hazard maps were used to find out the areas of attention for **above-normal** and **below-normal** precipitation.

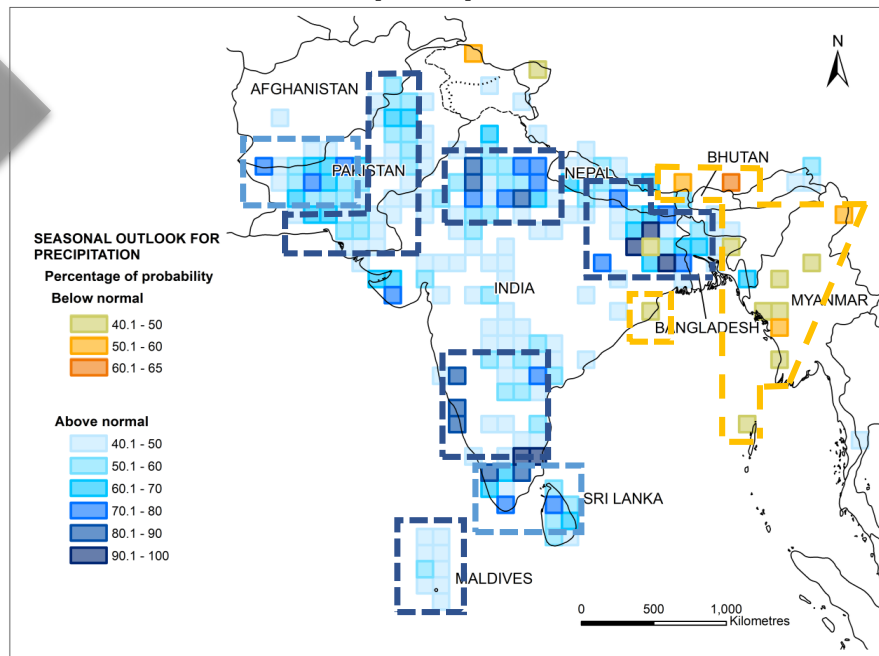

## Drought events from 1980-2001

## Areas of attention for below-normal precipitation

1. North-eastern parts: Myanmar
2. Eastern parts of Bangladesh
3. Eastern parts of India
4. Northern parts of Bhutan and Nepal

## Areas for attention for above-normal and below-normal precipitation, JJAS 2024

## Areas of attention for above-normal precipitation

1. Northern parts: north and north-east parts of India, most parts of Nepal and Bhutan. (90-100 % probability of above normal precipitation)
2. South parts: south and south-west parts of India and Maldives.
3. West parts: south-east and central parts of Pakistan

## Areas with advantage - Above-normal precipitation

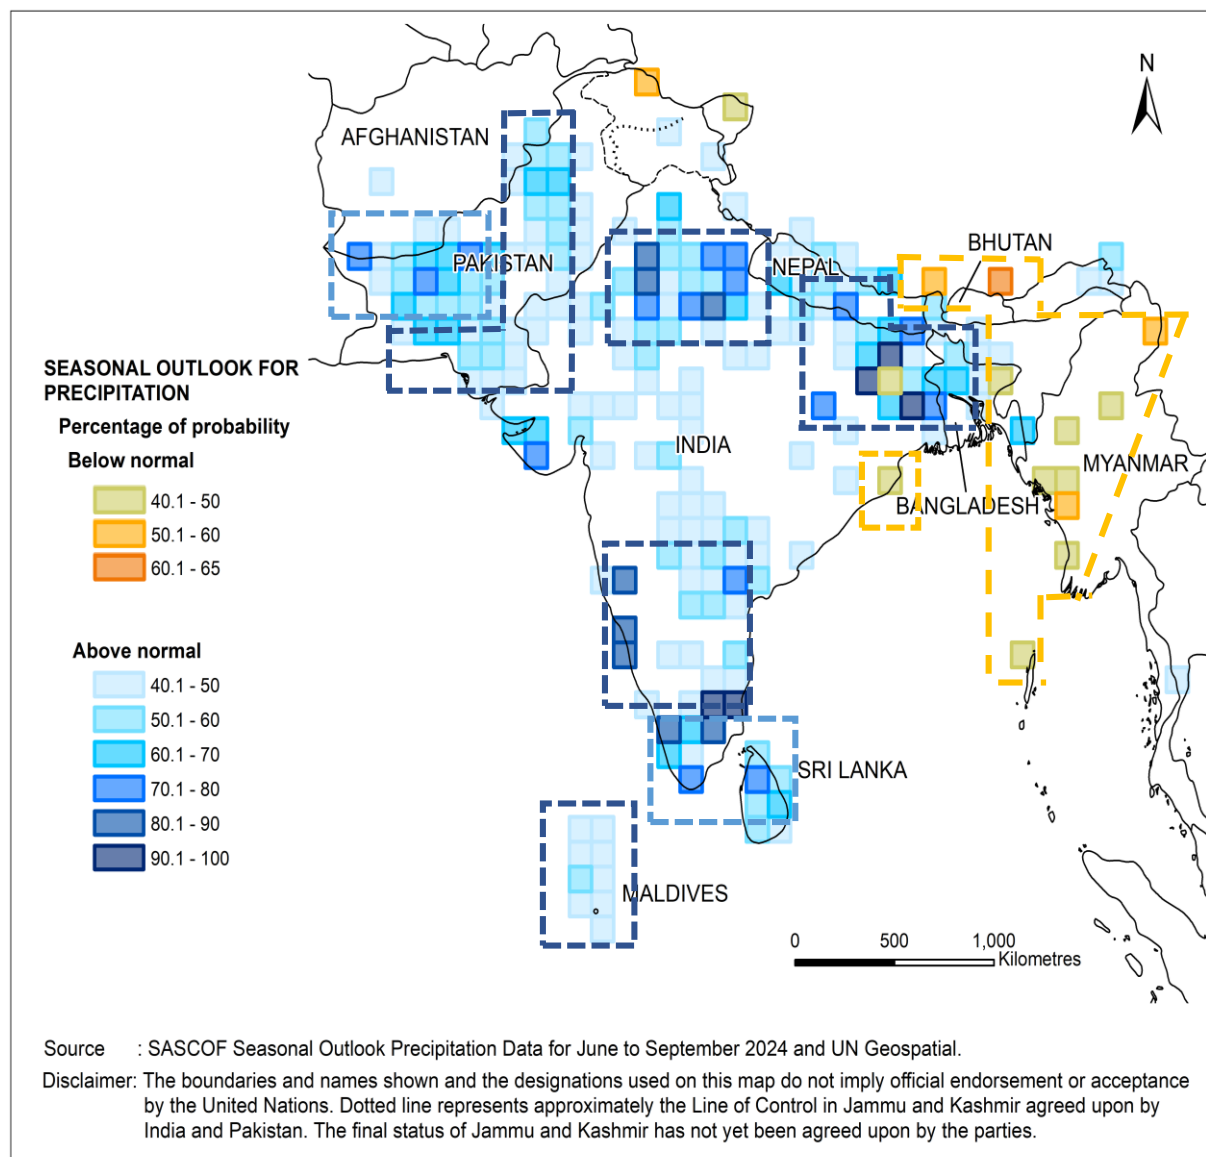

- a. north and central parts of Sri Lanka and Southern Parts of India
- b. South-west part of Afghanistan and south-east parts of Pakistan

## Seasonal outlook for precipitation JJAS 2023

### Areas of attention for below-normal precipitation

**1. East parts:** Entire Myanmar (upto 60% probability of below normal precipitation), Eastern parts of Bangladesh (upto 50% probability of below normal precipitation), and eastern parts of India (upto 50% probability of below normal precipitation).

**2. North parts:** Northern parts of Bhutan and Nepal. (upto 63% probability of below normal precipitation).

### Areas of attention for above-normal precipitation

**1. Northern parts:** north and north-east parts of India (up to 100 % probability of above normal precipitation), most parts of Nepal and Bhutan. (upto 70% probability of above normal precipitation)

**2. South parts:** south and south-west parts of India (up to 100% probability of above normal precipitation) and Maldives (up to 50% probability of above normal precipitation).

**3. West parts:** south-east, northern and central parts of Pakistan (up to 60% probability of above normal precipitation).

### Areas with advantage - Above-normal precipitation

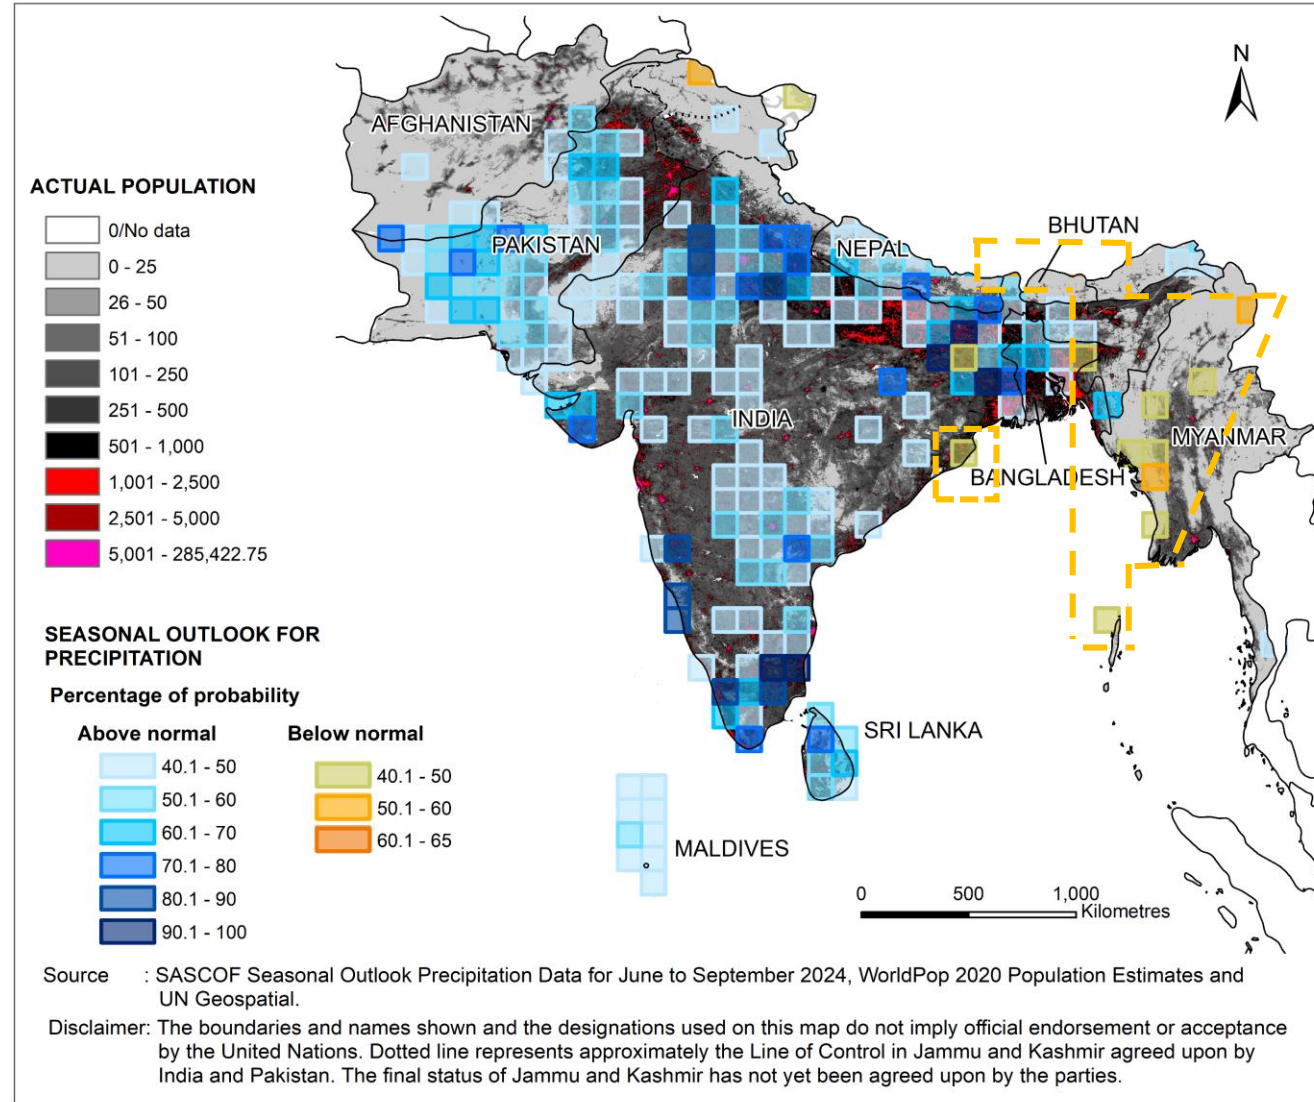

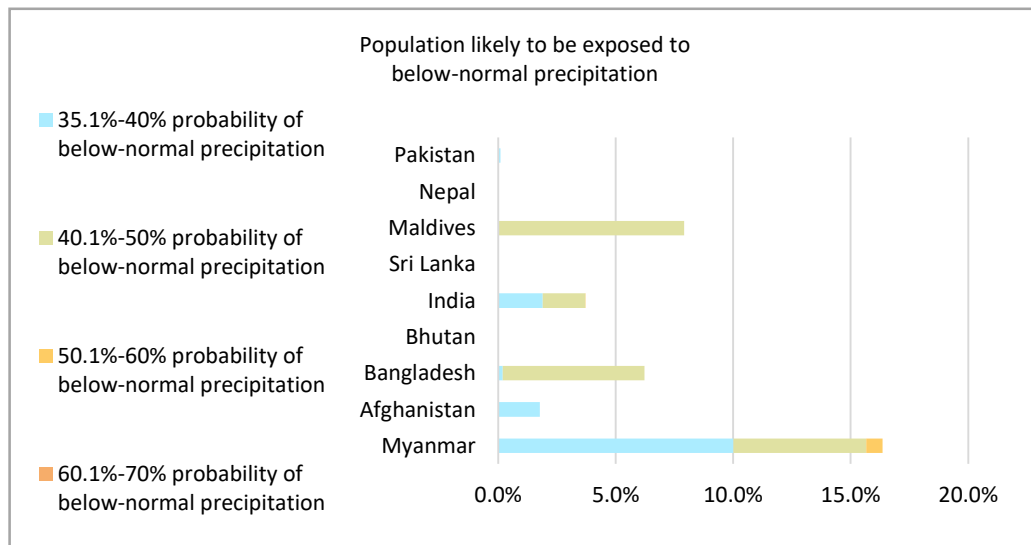

**a. South parts :** north and central parts of Sri Lanka (up to 80% probability of above normal precipitation) and Southern Parts of India (up to 100% probability of above normal precipitation).

**b. West parts:** South-west part of Afghanistan (up to 70% probability of above normal precipitation) and south-east parts of Pakistan (up to 70% probability of above normal precipitation).

# Estimation of population likely to be exposed to below normal precipitation

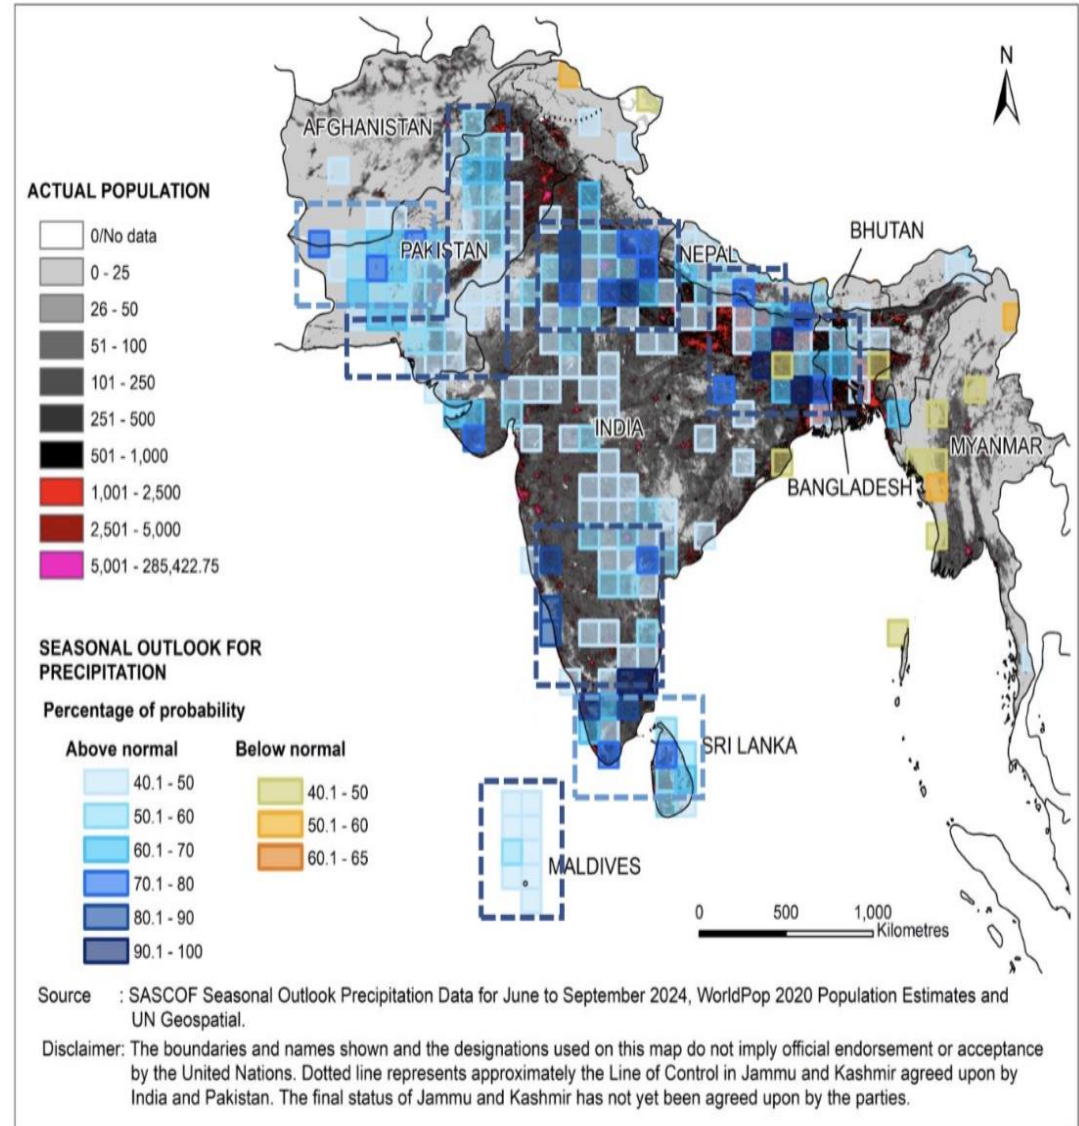

Country	Total population 2022 (thousands) ESCAP statistics	Percent of population exposure			Below normal precipitation
		35.1% - 40% probability of below normal precipitation	40.1% - 50% probability of below normal precipitation	50.1% - 63% probability of below normal precipitation	
Myanmar	53,927	10.0%	5.6%	0.70%	16.36%
Afghanistan	38,815	1.8%	0.0%	0.00%	1.77%
Bangladesh	163,304	0.2%	6.0%	0.00%	6.23%
Bhutan	782	0.0%	0.0%	0.00%	0.01%
India	1,362,261	1.9%	1.8%	0.00%	3.70%
Sri Lanka	21,002	0.0%	0.0%	0.00%	0.00%
Maldives	105	0.0%	7.9%	0.00%	7.91%
Nepal	29,422	0.0%	0.0%	0.00%	0.00%
Pakistan	216,086	0.1%	0.0%	0.00%	0.10%
<b>Total</b>	<b>1,885,705</b>	<b>1.7%</b>	<b>2.0%</b>	<b>0.02%</b>	<b>3.73%</b>

In total, only **3.73%** population of this region are likely to be exposed to **more than 35%** probability of below-normal precipitation.

# Estimation of population likely to be exposed to above normal precipitation

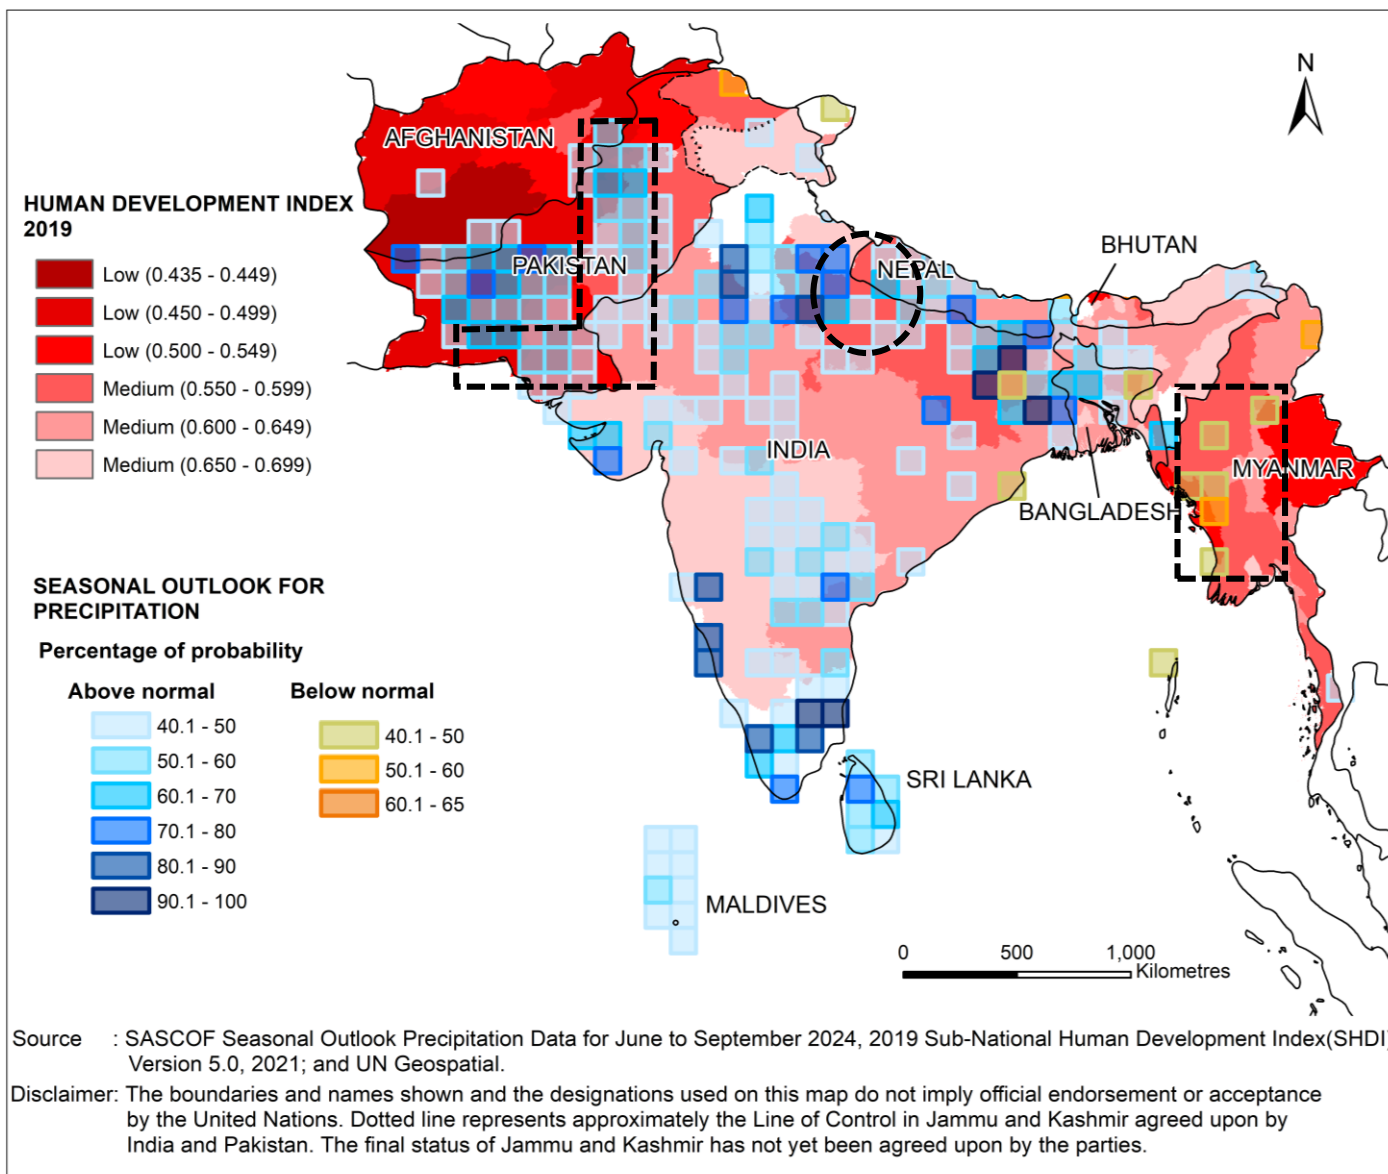

ROMNAM	Total population 2022 (thousands) ESCAP statistics	Percent of population exposure							
		35.1% - 40% probability of above normal precipitation	40.1% - 50% probability of above normal precipitation	50.1% - 60% probability of above normal precipitation	60.1% - 70% probability of above normal precipitation	70.1% - 80% probability of above normal precipitation	80.1% - 90% probability of above normal precipitation	90.1% - 100% probability of above normal precipitation	Above normal precipitation
Myanmar	53,927	8.3%	0.1%	0.0%	0.0%	0.0%	0.0%	0.0%	8.43%
Afghanistan	38,815	18.4%	5.4%	8.5%	0.0%	0.0%	0.0%	0.0%	32.38%
Bangladesh	163,304	17.5%	35.5%	7.0%	14.6%	1.9%	0.0%	0.0%	76.48%
Bhutan	782	27.3%	8.3%	3.4%	0.0%	0.0%	0.0%	0.0%	39.06%
India	1,362,261	20.1%	23.1%	12.8%	5.8%	5.1%	3.4%	3.7%	74.02%
Sri Lanka	21,002	0.0%	4.1%	56.1%	7.8%	6.2%	0.0%	0.0%	74.25%
Maldives	105	4.9%	86.1%	1.1%	0.0%	0.0%	0.0%	0.0%	92.09%
Nepal	29,422	7.5%	15.2%	11.1%	12.5%	24.9%	0.0%	0.0%	71.22%
Pakistan	216,086	38.2%	28.5%	19.6%	3.0%	0.2%	0.0%	0.0%	89.48%
<b>Total</b>	<b>1,885,705</b>	<b>21.16%</b>	<b>23.42%</b>	<b>13.11%</b>	<b>6.09%</b>	<b>4.30%</b>	<b>2.48%</b>	<b>2.66%</b>	<b>73.22%</b>

In total, **73.22%** of South Asia population are likely to be exposed to above-normal precipitation.

## Vulnerability indicators can be added to understand the vulnerability of people likely to be affected.

HDI is overlaid to understand the vulnerability of people exposed.

### Sub-national Human Development Index (SHDI)

Source: UNDP, 2019.

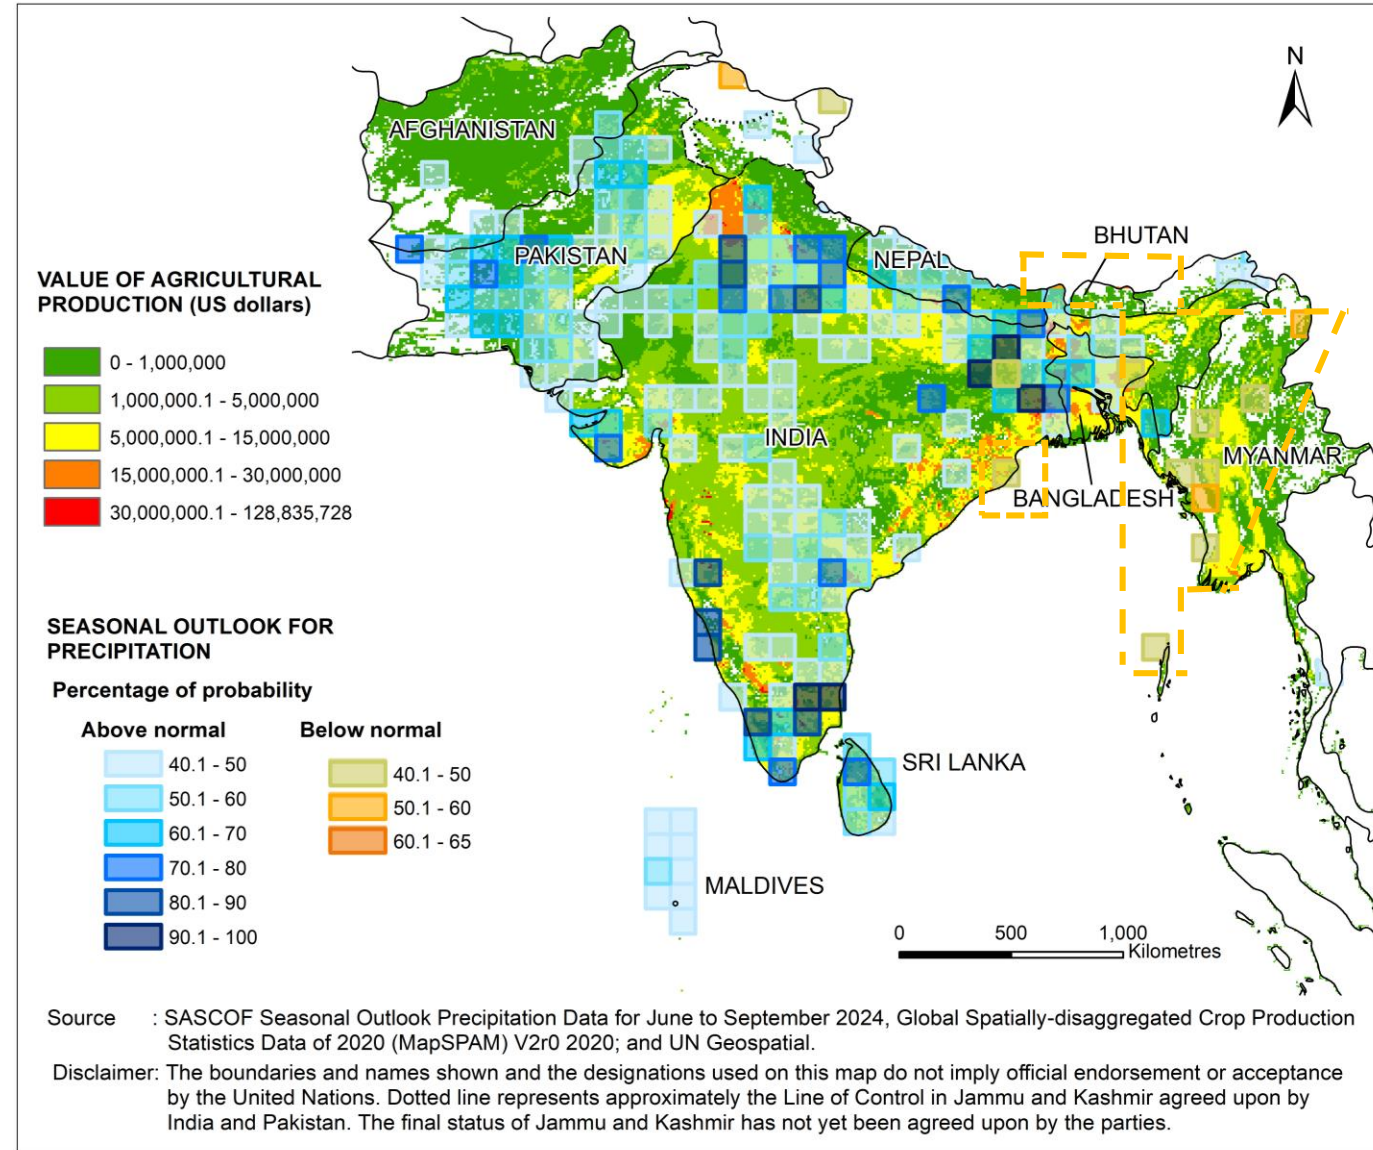

**Other indicators (poverty, income, education, literacy, or other vulnerability indicators) can be used as appropriate.**

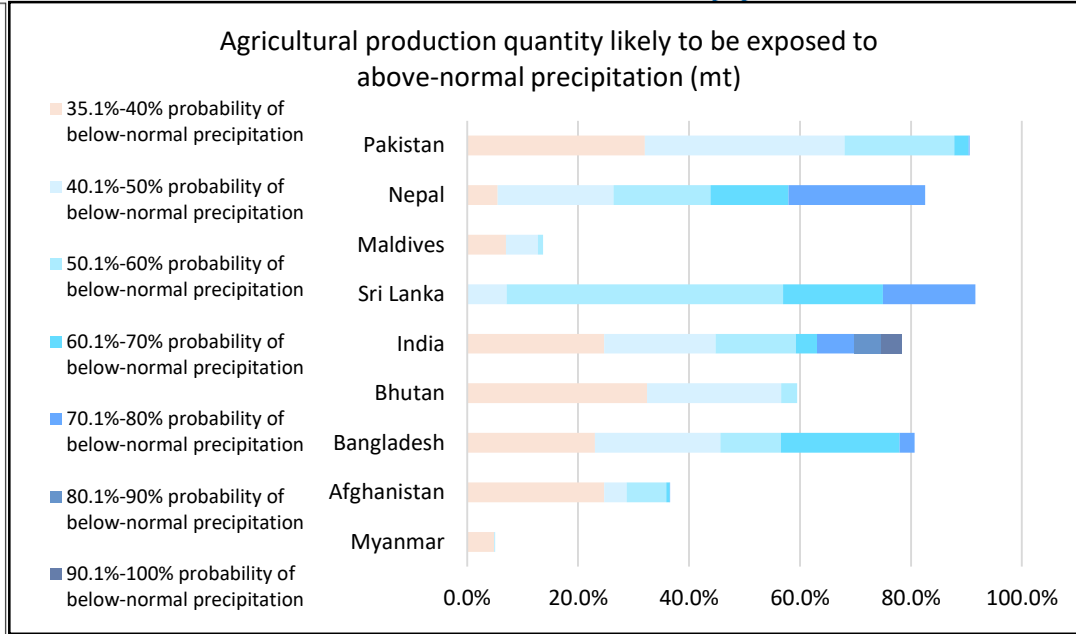

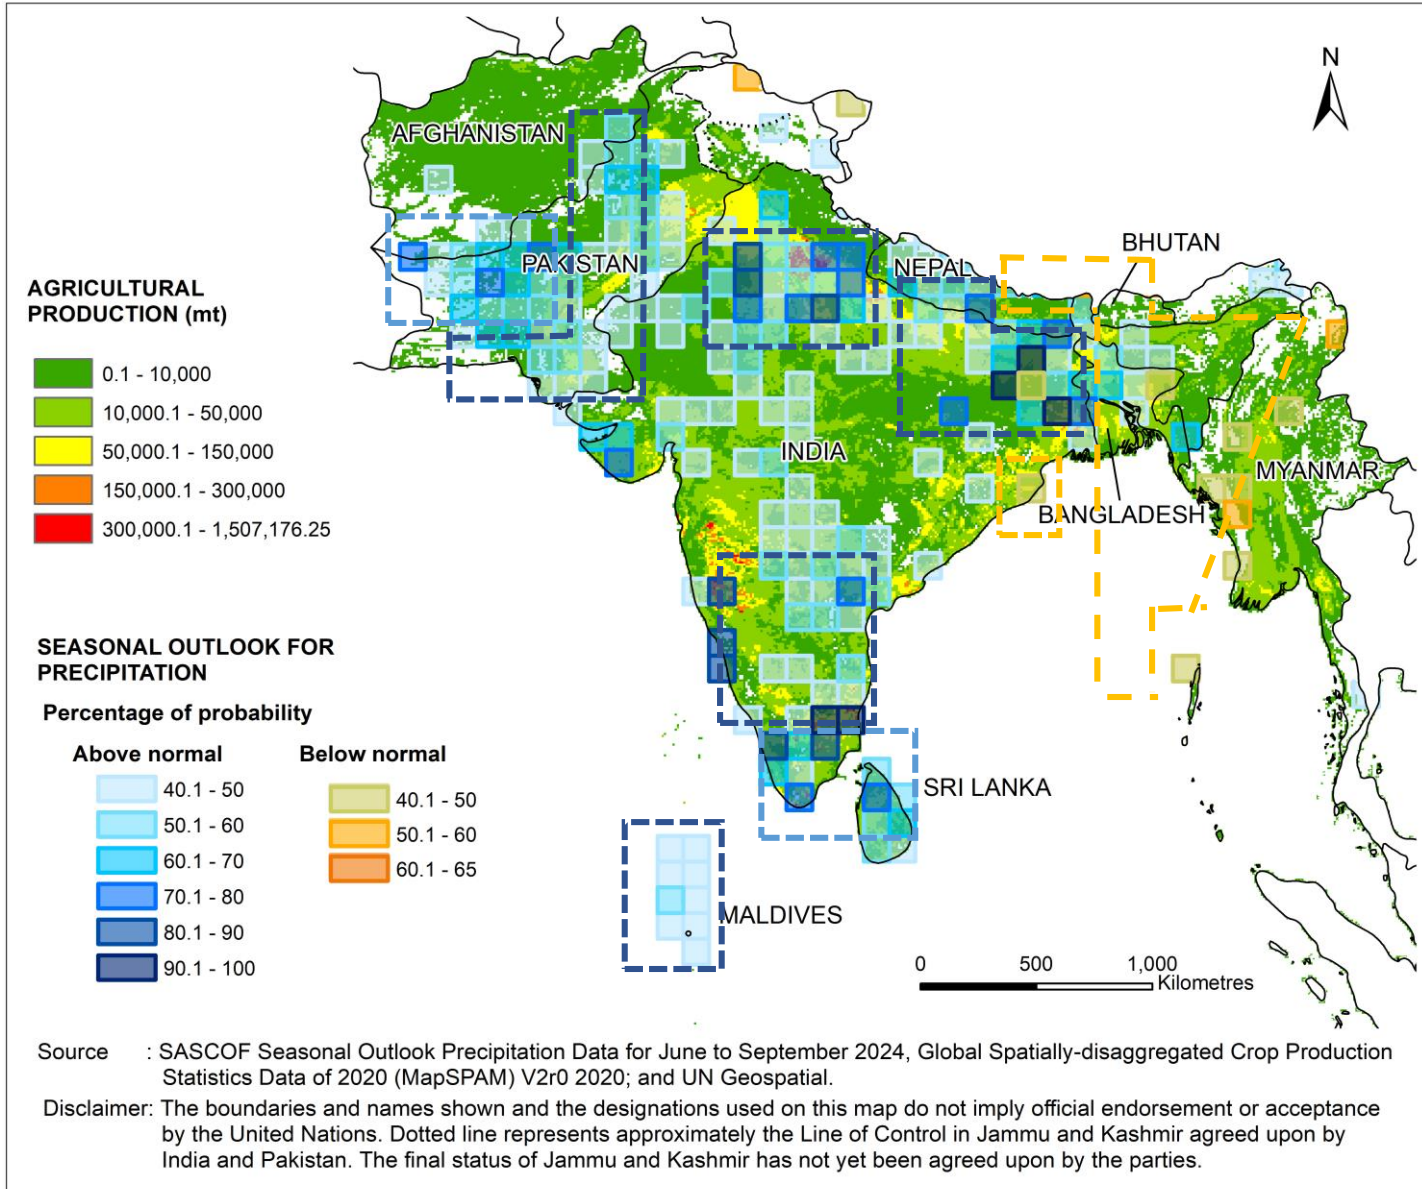

# Potential exposure of Agricultural production value

- **2.7%** of South Asia agricultural value are likely to be exposed to **high (40%-63%) probability of below-normal precipitation.** Under this precipitation category, 9% of Myanmar's agricultural value are likely to be exposed, followed by Bangladesh at 5.8% and India at 2.2%
- **In total, 6.0%** of South Asia agricultural value are likely to be exposed to **below-normal precipitation**

# Potential exposure of Agricultural production quantity

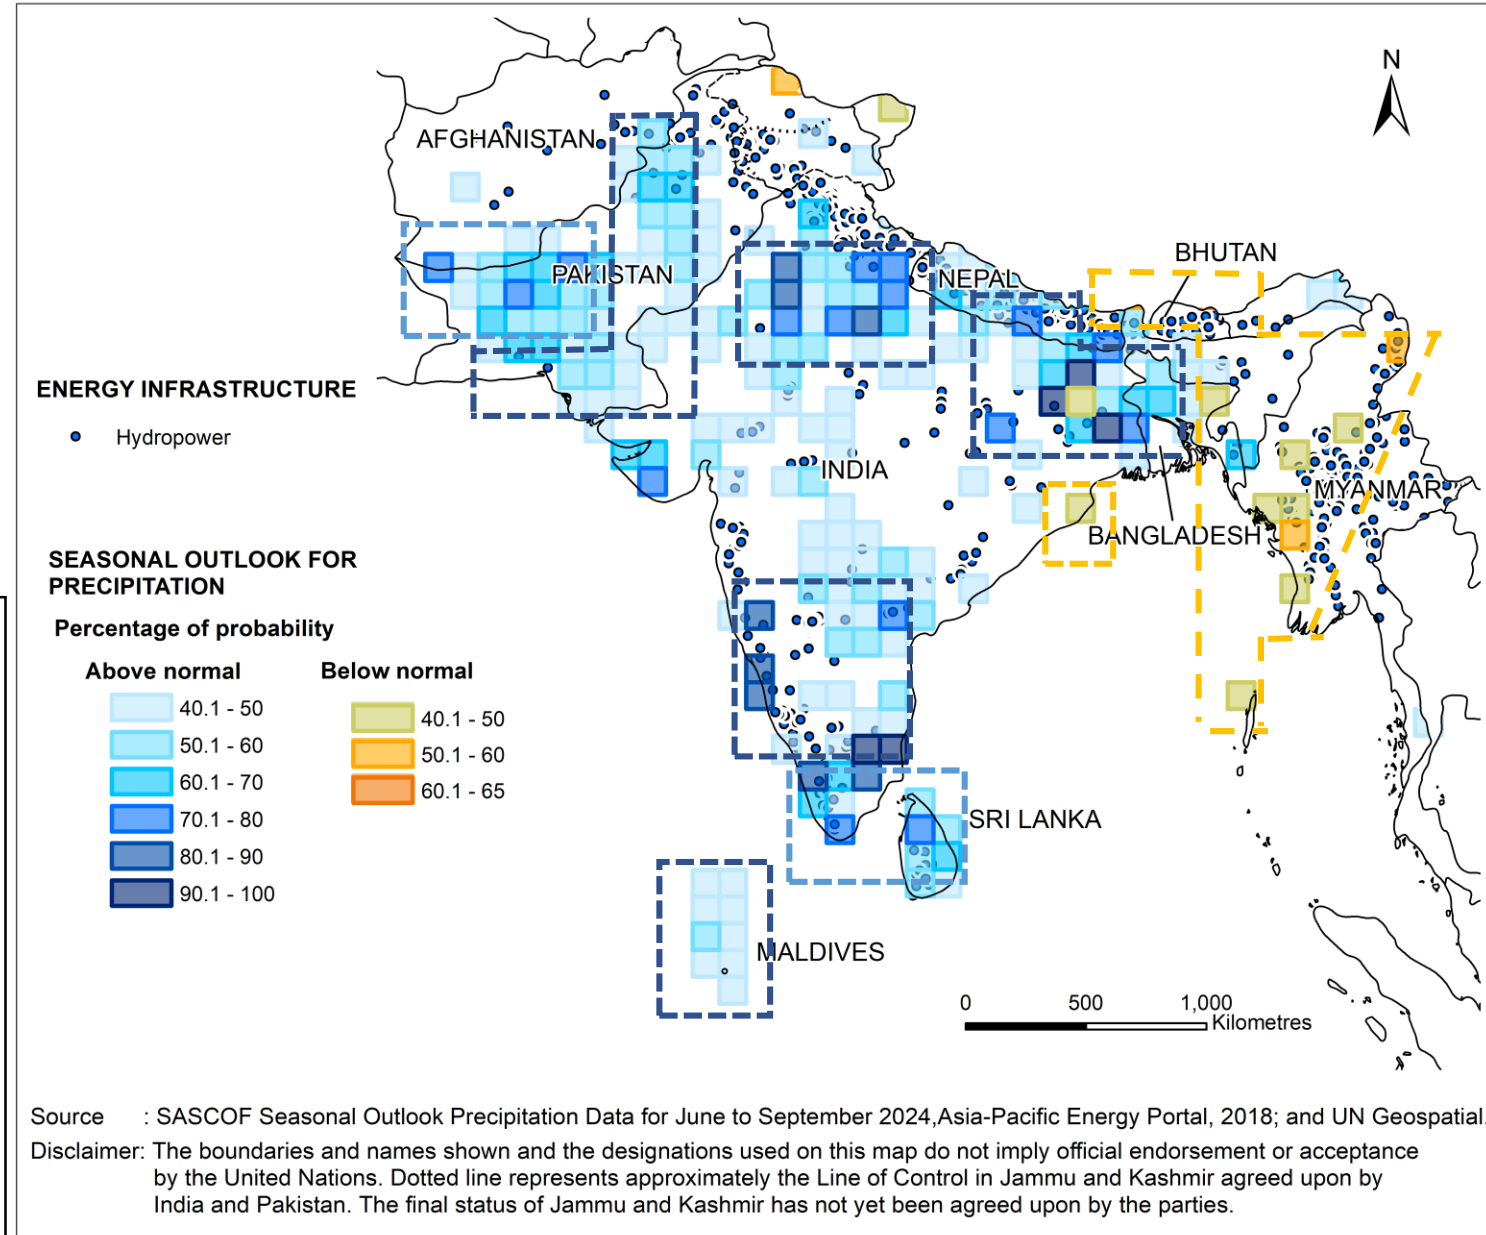

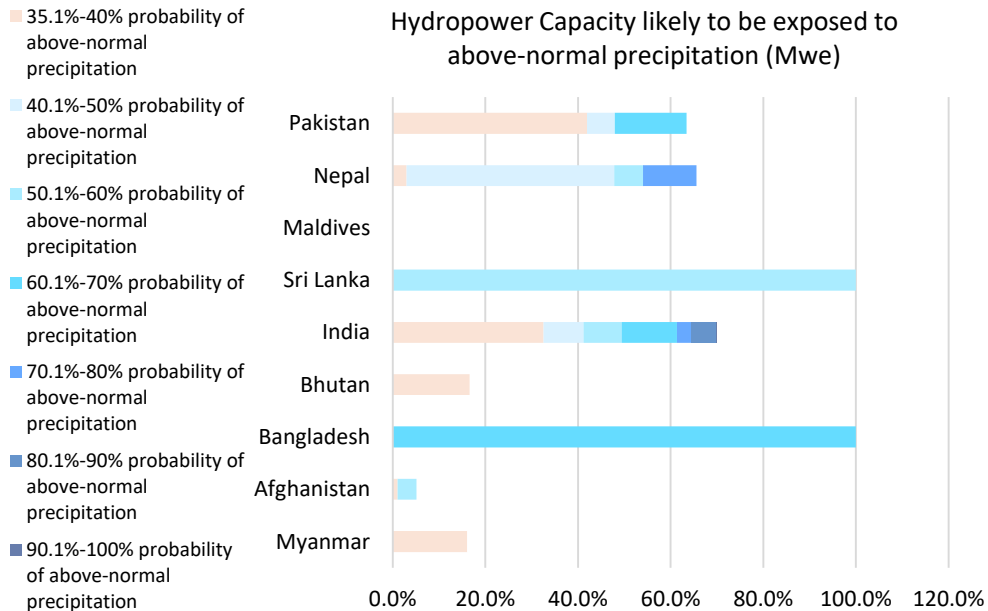

# Hydropower exposure

## Areas of attention for below normal precipitation

- **7.6%** of total hydropower plants' capacity in South Asia will be exposed to 35.1% - 63% probability of **below-normal precipitation**.
- Those are particularly located in Myanmar, India and Pakistan.

## Areas of attention for above normal precipitation

- **45.9** of total hydropower plants' capacity in South Asia will be exposed to 35.1% – 100% probability of **above normal precipitation**.
- Those are located in India, Pakistan, Myanmar, Bhutan and Sri Lanka.

# Bridging the science policy gap for informed action

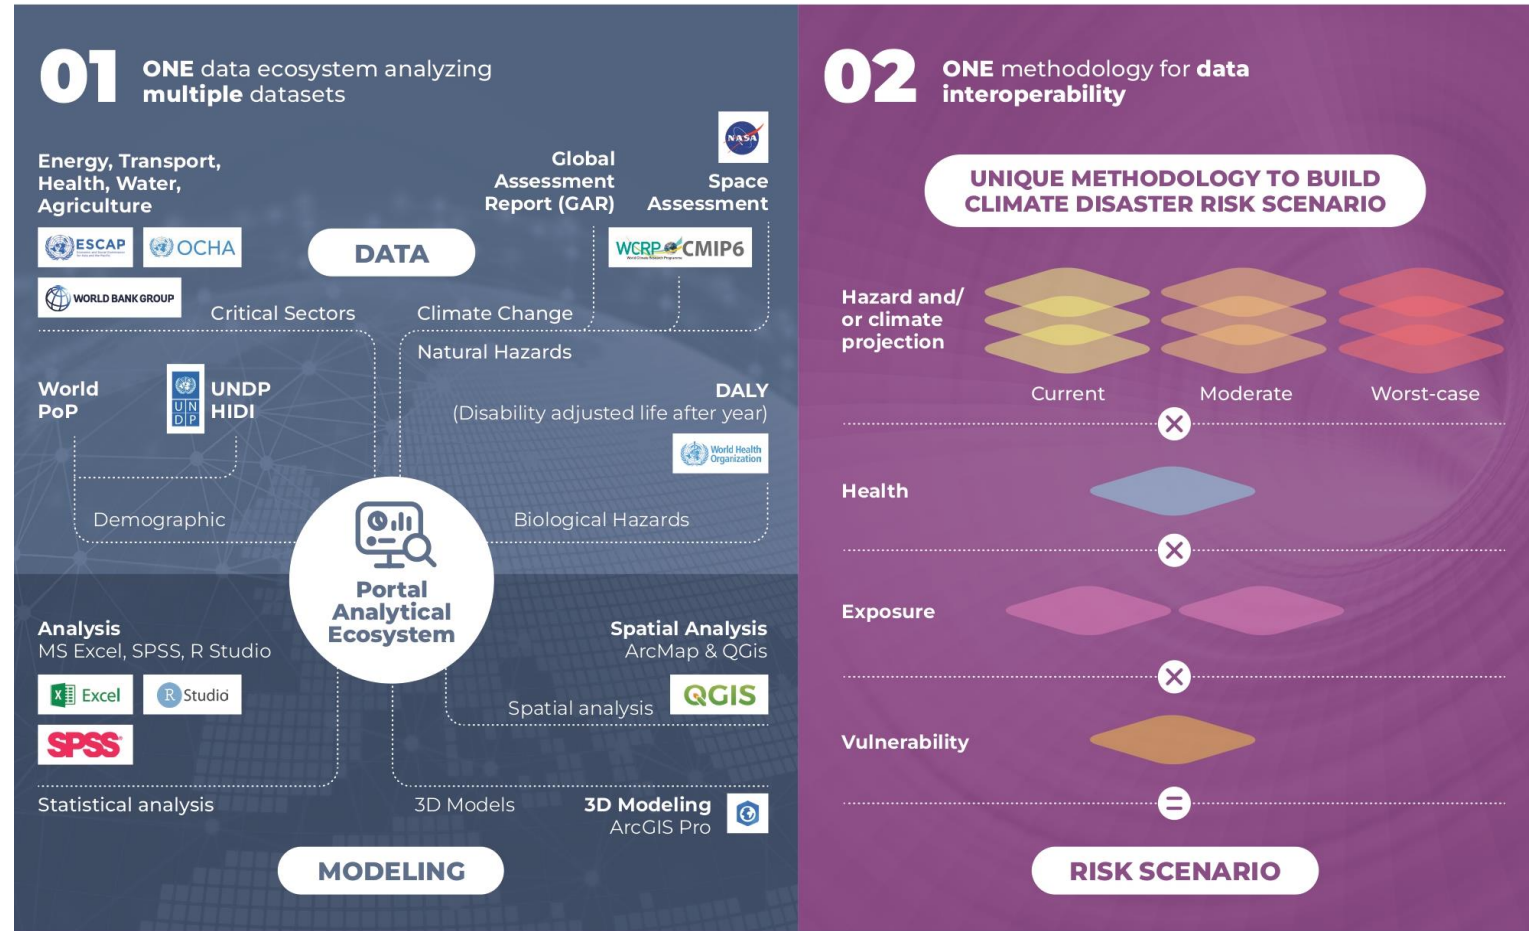

## RISK AND RESILIENCE PORTAL

An Initiative of the Asia Pacific Disaster Resilience Network

The **Risk and Resilience Portal**, an initiative of the Asia Pacific Disaster Resilient Network (APDRN) brings together **risk analytics and policy analysis under one platform** to strengthen capacity of all stakeholders for risk informed planning and budgeting

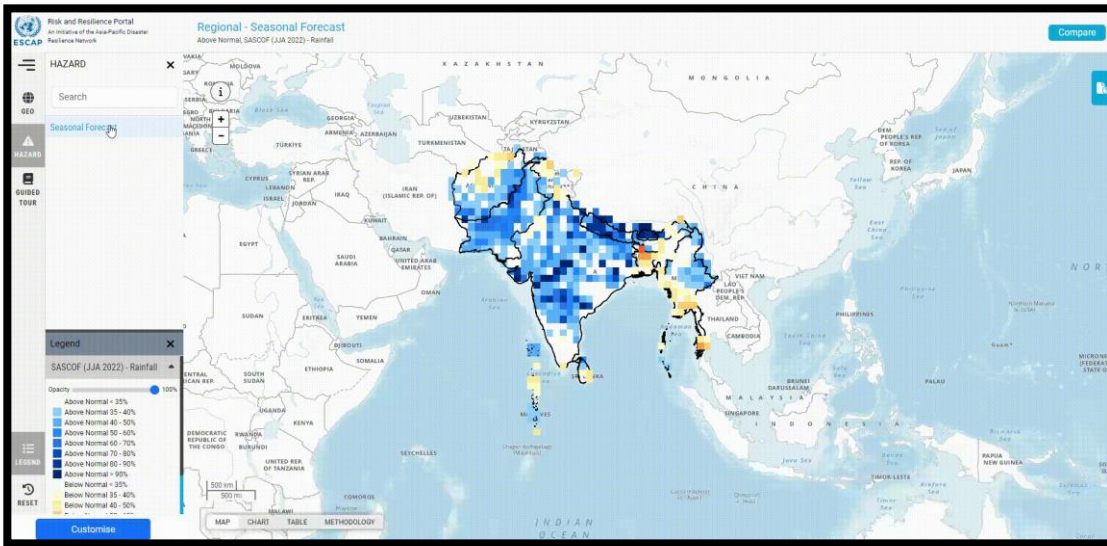

A screenshot of the Risk and Resilience Portal website. The browser address bar shows "rpp.unescap.org". The page header includes the ESCAP logo and the text "RISK AND RESILIENCE PORTAL An Initiative of the Asia Pacific Disaster Resilience Network". A navigation menu lists: HOME, HAZARD HOTSPOTS, ECONOMIC IMPACT, ADAPTATION COST &amp; PRIORITIES, DECISION SUPPORT SYSTEM, ANALYSIS, and KNOWLEDGE PRODUCTS. The main banner features a photograph of children and the text "Asia Pacific Risk &amp; Resilience Portal" and "Bridging the science policy gap for informed action". A blue button labeled "Data Explorer" is visible. Below it, statistics are listed: "700+ Datasets" and "100+ Policy documents".

# A Science-Policy-Action Interface is key to managing climate risk

The Portal is built on a state-of-the-art data intensive and risk analytics

# Automated Seasonal Impact-Based Forecasting

## INPUT\*

- Population data
- Infrastructure data
- Hazard data
- Boundary data

## OUTPUT

- Exposure and intensity zone of hazards
- Map & exportable table

## GEOSPATIAL PYTHON AUTOMATION SCRIPT

### GEOSPATIAL PRE-PROCESSING

- Setting Coordinate Reference Systems
- Setting resolution
- Classifying hazard (based on intensities, create different hazard intensity zones)

### PROCESS IDENTIFICATION

- Auto recognize type of infrastructure / population data

### GEOSPATIAL EXPOSURE

#### ANALYSIS

- Calculate exposure to all infrastructure and population
- Overlay & count exposure

# Demo of IBF Automation Tool

Moving to Browser for the tool Demo
